SUMMARY

Senior DevOps & AI Platform Engineer with 11+ years of experience building secure, scalable cloud infrastructure across pharma, banking, and product environments. Currently leading AI/LLM workflow orchestration at Roche, designing production platform processes powered by large language models (OpenAI, AWS Bedrock). Expert in AWS CDK and Terraform for enterprise-scale IaC, and GitLab CI/CD orchestration at scale. Proven track record in regulated and high-compliance environments. Available for senior/lead remote or Warsaw-hybrid roles.

EXPERIENCE

Senior DevOps Engineer

Mar 2024 – Feb 2026

Roche – Global Data Platform

Remote

- **AI & LLM Workflow Orchestration:** Designed and implemented production platform processes powered by LLMs (OpenAI, AWS Bedrock), focusing on automated decision support, workflow orchestration, and process execution at scale.
- **Infrastructure as Code:** Primary lead for cloud infrastructure provisioning using AWS CDK and Terraform; built modular, reusable components managing complex large-scale AWS environments.
- **Enterprise GitLab Orchestration:** Owned the entire GitLab CI/CD ecosystem at scale – global pipeline templates, runner management, and delivery standardization across data and analytics projects.
- **Python Tooling & Serverless:** Engineered internal automation tooling and AWS Lambda utilities to improve platform reliability, developer experience, and delivery speed.
- **Cross-team Platform Support:** Core contributor to the internal DevOps platform, providing reusable tooling and standardized pipelines for data-heavy and regulated environments.

Senior DevOps Engineer

Jul 2023 – Feb 2024

Foundever

Remote

- Designed and maintained AWS infrastructure using Terraform (RDS, SQS, ElastiCache, DynamoDB).
- Supported large-scale architecture modernization for high-traffic collaboration platforms.
- Developed and maintained serverless components using AWS Lambda; optimized cloud costs through infrastructure refactoring.
- Provided 3rd-line on-call production support for critical systems.

Lead DevOps Engineer

Oct 2022 – Jun 2023

PANEK CarSharing

Warsaw, Poland

- Led DevOps practice design and implementation for a new car-sharing mobile application, collaborating with development, operations, QA, and business owners to align delivery with business goals.
- Implemented AWS ECS, CloudFront, and Lambda, significantly increasing application availability, scalability, and cost-efficiency.
- Designed parallel/sequential GitLab CI pipelines covering build, test, deploy, and monitoring stages, reducing time-to-market and improving code quality.
- Managed infrastructure and deployments via GitOps principles, enabling version-controlled, auditable, and fully automated changes in production.
- Implemented security best practices including AWS Cognito, authentication/authorization, encryption, and network security across the platform.
- *Stack:* AWS (ECS, CloudFront, Lambda, Cognito), GitLab CI, Terraform, Docker, Ansible, Python, PostgreSQL, Azure

DevSecOps Engineer

Oct 2020 – Oct 2022

GFT – MoxBank by Standard Chartered (virtual bank, Asia)

Remote

- Built Privilege Access Management (PAM) systems and automated security workflows (vulnerability scanning, threat modeling, access control) for a leading digital bank in a highly regulated environment.
- Designed, implemented, and maintained secure AWS environments using EC2, S3, RDS, IAM, VPC, CloudTrail, CloudWatch, Lambda, and Security Groups.
- Implemented IaC using Terraform Enterprise, Ansible, and PowerShell; built Windows Server AMIs and Terraform scripts for full infrastructure ecosystems.
- Integrated monitoring, logging, and HashiCorp Vault services; reduced manual operations during updates and deployments.

- Ensured compliance with banking security standards; collaborated across development, operations, and security teams to align DevOps with regulatory requirements.
- *Stack: AWS, Terraform Enterprise, CircleCI, Ansible, Docker, Datadog, HashiCorp Vault, Falco, PowerShell, Python, Windows Server*

DevOps Engineer

Jun 2020 – Sep 2020

Pentacomp Systemy Informatyczne – E-Zamówienia platform

Warsaw, Poland

- Established and managed Kubernetes application platforms on AKS for a public sector e-procurement platform.
- Built CI/CD pipelines, IaC, and integrated monitoring, SSL certificates, and email services within Azure.
- *Stack: Azure, AKS, Kubernetes, Helm, Terraform, Jenkins, Ansible, Docker, ELK, SonarQube, Bash*

DevOps Engineer

Aug 2019 – Jul 2020

BNP Paribas Bank Polska – GOnline internet banking

Warsaw, Poland

- Automated CI/CD processes for continuous integration and configuration of highly available internet banking application servers on OpenShift.
- Improved CI/CD pipelines and software shipping processes; developed application platform hosted on OpenShift including logging and monitoring systems.
- Processed migration and integration of 3rd-party systems to the new platform.
- Provided tooling and support for software developers and business analysts.
- *Stack: RedHat, OpenShift, Jenkins, Ansible, Docker, ELK, Prometheus, Nexus IQ Server, Python, Bash, JVM*

Big Data DevOps Engineer

Jun 2018 – Jul 2019

DXC Technology – IT4AD (Big Data for Autonomous Driving)

Multinational team

- Maintained and developed MapR Hadoop platform supporting large-scale data analytics and AI model training workloads for a leading automotive group.
- Designed and managed Kubernetes-based hosting environments for data analytics applications and AI training tools.
- Built and maintained CI/CD pipelines and customer system integrations using Jenkins, Docker, and Helm.
- Developed automation, centralized logging, and monitoring systems (Nagios, Bash scripting) across the platform.
- Implemented systems hardening and security solutions across SUSE Linux environments.
- *Stack: Apache Hadoop (MapR), Kubernetes, Docker, Helm, Jenkins, Ansible, Apache Spark, Apache Zeppelin, Nagios, Azure, Bash, SUSE Linux*

Junior DevOps Engineer

Oct 2017 – Jun 2018

Info Design Systemy Informatyczne – BSH Group (Bosch & Siemens Home Appliances)

Warsaw, Poland

- Delivered a high-availability, self-healing hosting platform on AWS for the BSH Group's Atlassian development stack serving 8,000 users.
- Migrated applications and databases across cloud environments, ensuring zero-downtime transitions and data integrity.
- Integrated CI/CD pipelines and monitoring tooling; automated deployments using Atlassian Bamboo and AWS CodeDeploy.
- Authored Ansible playbooks, roles, and backup scripts to automate configuration management and platform maintenance across Linux servers.
- *Stack: AWS, Ansible, AWS CloudFormation, AWS CodeDeploy, Atlassian Bamboo, JFrog, Linux, Bash*

EARLY CAREER

Digital Virgo | *Junior SysAdmin – Mesosphere DC-OS, microservices monitoring, incident management* 2016 – 2017
Netadmin | *Network Administrator – Windows Server, Active Directory, Linux, networking* 2014 – 2017

ADDITIONAL

Infoshare Academy | *DevOps Trainer – Terraform and Docker training across skill levels (part-time)* May 2022 – Present

SKILLS

AI/LLM Integration: OpenAI API, Azure OpenAI, AWS Bedrock, LLM workflow orchestration
IaC & Automation: AWS CDK, Terraform (Expert), CloudFormation, Ansible, Helm, AWS CodeDeploy
CI/CD: GitLab CI (Expert), GitHub Actions, Jenkins, Azure DevOps, CircleCI, JFrog
Cloud: AWS (Expert), Azure, OpenShift, LocalStack
Programming: Python (Advanced), Bash, PowerShell, SQL
Containers & Orchestration: Kubernetes (AKS/EKS), Docker, ECS, Mesosphere DC-OS
Security & Monitoring: HashiCorp Vault, Datadog, Prometheus, Grafana, ELK Stack, Falco, SonarQube
Data & Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Hadoop (MapR)

CERTIFICATIONS

HashiCorp Certified: Terraform Associate	2024
ITIL Foundation Certificate in IT Service Management	2018
MTA: Networking Fundamentals	2016
